X6 Ranch, Carnahan Angus, Peebles Family Angus, TNT Angus, Spencer Angus, Post Office Ranch

**205 Wt.** - This is the weaning weight adjusted to 205 days of age. For example: a bull weighs 650# at 220 days old with an 80# BW  
650# - 80# = 570# (weight gained in 220 days)

570# divided by 220 days = 2.59#/day

2.59# per day x 205 days = 531#

531# + 80# (birth weight) = 611#

An age of dam adjustment is added so that older cows or heifers can be compared to the average cow. These 205 day weights are figured by the animal’s respective breed office. These adjusted numbers are useful for within herd comparison where environmental factors are the same.

**Scrotal Circumference** - is a measurement taken to help determine if a bull’s heifer calves will reach puberty earlier than any other bull’s and also sperm production is directly proportional to scrotal size. As of now there is no adjustment for age, but 32 cm for a one year old and 36 cm for a 2 year old is a good standard. Remember that a 9 month old bull will have a good scrotal size at one year if he measures 29 cm.

**P.A.P. or Pulmonary Artery Pressure** - is an indication of a bull’s genetic ability to tolerate high altitudes. The higher the P.A.P. score the lower the altitude the bull should be maintained at. Bulls that develop brisket may or may not have a genetic problem, but may be the result of an environmental influence such as sickness, feed, or stress. Dr. Tim Holt recommends that bulls with a P.A.P. score greater than 48 be used at elevations lower than 6,000 feet.

**About the Bulls** - The bulls have all been fed together except the two year olds. Our goal was to average a 3.3# A.D.G. We believe that fat bulls are not practical. The 3.3# per day is enough growth for a group, knowing some will exceed this rate due to genetics or due to the bull’s ability to consume more feed than others (temperment, environment, etc.). The yearling bulls have been vaccinated with 8 way, Cattle Master 4, Nasalgen. All bulls have been wormed with Dectomax and have been fertility and P.A.P. tested. All bulls - Trich and **PI-BVD tested negative**. Average daily gain and scrotal circumference will be available on sale day along with DNA carcass composition.

**Bulls traveling to Utah** - All “Pot of Gold” bulls sold will have been tested once for trichomoniasis, found negative, and ready to haul.

**Bulls traveling to NM** - Shall be proven negative for TB prior to leaving CO. This requires a three day test prior to shipping plus an entry permit. We will arrange for the test and permit for you.

**Hauling of Bulls/Feed** - All bulls may be hauled directly from the sale or can be delivered to central locations as needed. Bulls can be fed at Denham’s Feedlot for \$2.25 per yearling bull per day and \$2.60 per two year old bull per day (price good for 90 days). “Pot of Gold” can help with these arrangements but the owner of the bull(s) will be responsible for all vet costs, feed costs, and liability on the bull(s).

Dear Fellow Cattlemen,

Welcome to the 19th annual "Pot of Gold" Bull Sale!

Have you ever been to a bull sale and the bulls offered are still the same type that they sold twenty years ago? The beef industry changes every day, so we as seedstock providers must change also but not chase the fads. "Pot of Gold" focuses on breeding and developing bulls that work for you on the mountain ranges and in the valleys. "Pot of Gold" has continually stressed moderate sized bulls that sire calves that come easy, grow well, and have the genetic potential to perform well in the feedlot or as replacement heifers. A.I. sires are used heavily to bring the sale offering the most up-to-date genetics possible. Utilizing DNA data from A.I. sires and DNA data of the sale bulls helps to assure buyers that we are using the best bulls available for carcass traits such as tenderness, marbling, and fat thickness. Compare our selection of bulls to other sales and you will find the data and phenotype to prove our claims.

Our unique selection process sorts out the marginal bulls and puts pressure on the consignors to bring only the best bulls they have to offer. There are no excuses here for a bull - just solid, good structured, well-made, genetically sound bulls.

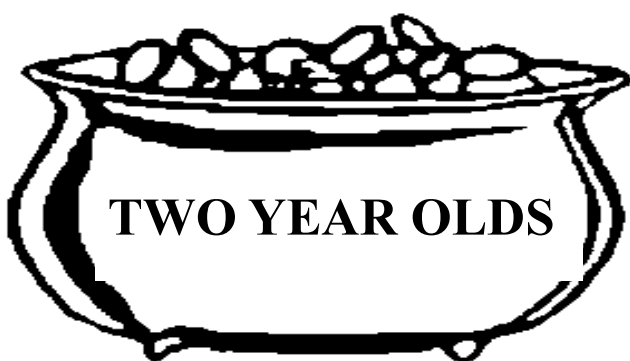

To the best of our knowledge, all cataloged bulls with Angus genetics that were considered a suspect carrier for the AM and/or NH genetic defect (by the AGA or AAA) have been DNA tested by Igenity® and determined to be free from AM and NH.

For the second year, we will be offering females for sale private treaty on sale day. A select set of quality registered Gelbvieh and Black Angus open heifers will be on display but not cataloged.

Plan to come early on Friday, February 26th to check out our Gelbvieh, Angus, and Balancer bulls and enjoy a complimentary lunch. The sale starts at 12:00 noon. If you are unable to attend, feel free to use our satisfaction guarantee on all phone orders! You can have Denham's Feedlot feed your bulls until you are ready to pick them up.

Sincerely,

"Pot of Gold" Bull Sale
